

Diabetes Canada

Research Strategy 2024-2029

Guided by our vision of a world free of the effects of diabetes, Diabetes Canada supports innovative research in two interconnected ways by:

Advancing knowledge and solutions that address the issues and challenges identified by the diabetes community in Canada; and

Strengthening capacity to conduct relevant and impactful diabetes research in Canada.

Diabetes Canada aspires to award **\$60 million in new research funding**

by 2029 through four research programs:

- **End Diabetes Awards**
- **Research Trainee Funding**
- **Diabetes Impact Funds**
- **Research Collaboration Support**

Diabetes Canada strives to be a **key partner to the diabetes research community**—and the next generation of researchers—by contributing to their ongoing success.

We will continue to be the **trusted resource** for the latest diabetes research in Canada, **connecting leading scientists and clinicians** in the diabetes field with people living with the complex condition, demonstrating **real-world impacts** of innovations and breakthroughs.

Commitments

Aspire to end diabetes

Support research in prevention and treatments that improve quality of life, enhance access to care, and uncover breakthroughs to end diabetes.

Center on people with diabetes

Improve the lives of people living with or at risk of diabetes and incorporate lived experience perspectives into the research we support.

Recognize the complexities

Fund research recognizing that the causes and management of diabetes are complex, and include biological, environmental, social, and other determinants of health.

Collaborate with the diabetes community

Engage the community of researchers, clinicians, scientists, and people with lived experience and foster partnerships with other organizations.

Drive impact from donor support

Maximize the research progress enabled by donor support by leveraging funds and prioritizing evaluation.
