

Diabetes 360°

Canada is in urgent need of a national Diabetes Strategy - **Diabetes 360°**

Diabetes is a costly disease. In Canada every 24 hours:

480 people will receive a diagnosis of diabetes

14 people will have lower limb amputations

Our health care system will spend almost **\$75 million** treating Canadians with diabetes

More than **20** will die of diabetes complications

Diabetes 360° can deliver results in just 7 years by focusing on the following key targets:

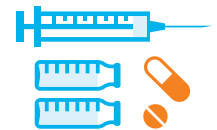

90% of Canadians live in an environment that preserves wellness and prevents the development of diabetes

90% of Canadians are aware of their diabetes status

90% of Canadians living with diabetes are engaged in appropriate interventions to prevent diabetes and its complications

90% of Canadians engaged in interventions in achieving improved health outcomes

Investment of \$150 million benefits:

\$18 BILLION in cost savings from prevention alone

770,000 FEWER cases of type 2 diabetes

245,000 FEWER hospitalizations for diabetes

35,000 FEWER lower limb amputations
